Your Vets:

DR NICK WEST

BVsc (Hons)

Special Interests: Small Animal Medicine & Surgery, Dermatology, Acupuncture, Dentistry

DR MARCUS STAFFORD

BSc BVMS CertGP (SAP)

Special interests: Internal Medicine and Orthopedics

DR JEROME KALVAS

BVsc

Special interests: Wild life medicine

DR AMANDA HENDERSON

BSc BVMS

Special interests: Soft tissue surgery, Feline medicine

Your support staff:

McVale Vet Nurses: Kelly, Moni, Rebecca, Lindsay and Danielle

Coromandel Valley Nurses: Michelle, Bronwyn, Kelly and Rebecca

Are looking forward to help you with your appointments, and any questions you might have about the care and welfare of your pets.

Clinic Hours:

The clinic can be contacted between 8.30am and 6.30pm CV and 5.30pm MV weekdays, and between 8.00am and 12.00noon on Saturdays.

Consultations are by appointment during the following hours ...

Weekdays 9.00am – 11.00am

4.00pm – 6.30pm CV and

4.00pm – 5.30pm MV

Saturdays 9.00am – 12.00noon

Surgery and In-Hospital care occurs between 11.00am – 3.00pm weekdays.

After hours emergencies – at night, on weekends and Public Holidays Call the main number, and a recorded message will direct you.

House Calls by arrangement with your Familypet Vet Veterinarian.

Familypet Vet

Spring – Abscess Season for Cats

Generally in Spring many vets will notice an increase in cases of cats brought into their surgeries with abscesses that need treating. Although they occur all year round abscesses are particularly prevalent during Spring as this is usually breeding season for cats and cats are also more active coming into the warmer weather. Over winter, cats lean to staying inside more and keeping warm, as the rest of us are inclined to do also.

An abscess is what occurs when an infection gets under the skin of the cat and fills with pus and fluid and will eventually burst. They are most commonly cause by scratches and bites from other cats when cats get into a fight. They are usually found around the face, neck, front legs, tail and rump. It is a good idea, if your cat goes outside regularly and particularly at night, that you check your cat over often by running your hands over the cat and checking for any lumps or wounds that could develop into further infection. You may not notice an injury as cats tend to appear normal and hide their pain until it reaches infection stage. Some things to look out for to tell you that something may not be right with your cat are:

- Your cat is extra sluggish and lethargic
- Loss of appetite
- Fever
- Swelling, redness and/or heat in a particular area
- Your cat not wanting to be picked up or held

Once you have found an abscess, the next step is treatment. While some people try their hand at treating it themselves at home, by far the best course of action is to take your cat to the vet. This insures that the risk of further infection is eliminated due to proper treatment in a sterile environment and the vet being able to provide you with antibiotics, pain relief for follow up care and also an Elizabethan collar (or cone)

to put on your cat to stop them from aggravating the wound by scratching it. After treatment, your cat will be house bound, perhaps for a number of days until the area heals sufficiently.

One thing to make sure of year round is that your cat is up to date with all of its vaccinations, because as abscesses are commonly caused by bites from other cats you don't know what your cat could contract from another neighbourhood moggy or stray.

There are a few things you can do to prevent the risk of you and your cat having to go through the ordeal of pain and expense. First of all, if you are able to, keep your cat indoors. If your cat is an outdoor cat, try to limit it going outside at night as this is when the majority of fights occur. Neutering your cat is very important. Un-neutered cats are the most likely to fight and will take on any of the cats in the neighbourhood, so by neutering you are doing yourself and your area a favour by hopefully reducing the amount of fighting cats.

Canine Careers – Search and Rescue

Dogs throughout history have been bred and kept for many different tasks and services to people. From hunting and retrieval to guarding, lap dogs and of course family companions and friends. Today we continue to use the dogs' intelligence, loyalty and willingness to please to put them to use in some very important jobs. They become part of the workforce they are involved in and are generally considered as another staff member and comrade. Search and Rescue is one in a long list of tasks that these loyal animals perform for us.

In many cases of disaster and loss specially trained dogs are called on to use their extraordinary scenting abilities to help find people who are missing, wounded or casualties. These situations can be widely varied, including aftermaths of hurricanes, earthquakes, flooding, tsunamis, landslides, avalanches, bombing, helping the police with missing persons and searching for trampers and sightseers who may be missing in remote and dangerous terrain such as mountain passes and dense bush.

A dog's sense of smell is approximately 10,000 times stronger than ours and they are much better at discriminating different types of scent. Humans shed up to 40,000 skin cells every minute which the dogs are easily able to pick up and locate.

Search and rescue dogs date back to 1660 in a place called St Bernard Pass, a mountain route through the Alps between Switzerland and Italy. These were the ancestors of what we know today as the St Bernard. They were originally kept as guard dogs, but their talents were quickly recognised and monks trained them to help locate people trapped by the snow.

Later search and rescue dogs played an important role in WWI and WWII. British, American and Germans used the dogs to help find missing and wounded soldiers. After WWII they were used in the Swiss Alps by the Swiss Alpine Club to locate people trapped by avalanche.

There are two categories for Search and Rescue dogs: air scenting and trail scenting. Air scenting dogs roam off their leash and sniff the air to locate who they are looking for, while trail scenting dogs are kept on a leash and use their nose

and ears together to find a scent on the ground. Air scenting is used to work in areas that may have been contaminated by other human searchers and trailing is used when the scent is weeks old. Search and Rescue dogs are quite often trained in both methods.

Dogs are selected very carefully to be introduced to this type of training. They will be challenged with training for many skills such as advanced obedience, agility, jumping, tracking, scenting and sounding. While selection is not breed specific some breeds stand out for these tasks. Bloodhounds have a superior sense of smell. German Shepherds, Belgian Malinois, golden retrievers and Labradors also excel in training. The dogs are also needed to have great concentration, so that they are able to keep to the task at hand for up to eight hours a day on any given search.

In addition to the canine effort, it cannot go unmentioned the amazing training and commitment that goes into creating a successful Search and Rescue dog, by his human counterparts. There are years of training and maintenance which these skilled and dedicated trainers, supporters and organisations take on for the benefit of so many who may one day be in need of rescuing.

Benefits of De-sexing Pets

De-sexing is the surgical removal of an animal's reproductive organs (the testes in male, and the ovaries and uterus in female). It is mostly done on animals between 6-8 months of age although the operation can be carried out at any time.

While there are those that disagree with the practice, the majority of dog owners know that de-sexing their companions is one of the first things that should be done in a dog's life. This is, of course, unless you are planning on breeding your dog and have the accommodations and finances necessary to take care of litters of puppies. However, the average dog owner does not plan on breeding their dog. People are becoming new dog owners everyday and many either do not understand why their dog should be de-sexed or believe it is an unnecessary practice done for the owners benefit. The fact is there are many reasons why pet owners should desex their pets. As well as helping to stop pet overpopulation, the following are some of the other benefits associated with de-sexing cats and dogs.

Health

- Reduced risk of getting cancer or other diseases of the reproductive organs, such as testicular cancer, benign prostatic hyperplasia/disorders in males, and cystic ovaries, ovarian tumours, acute uterine infections and mammary cancer in females, and also

diseases such as perianal tumours and perineal hernia.

- Females can suffer from physical and nutritional exhaustion if continually breeding.
- Pets generally live longer and healthier lives.

Behavioural

- Pets are less prone to wander, fight, and are less likely to get lost or injured.
- Reduces territorial behaviour such as spraying indoors.
- Less likely to suffer from anti-social behaviours. They make better companions.
- Eliminates "heat" cycles in female cats and their efforts to get outside in search for a mate.
- Reduces dogs' urge to "mount" people's legs.

Cost

- Reduces the cost to the community of having to care for unwanted puppies and kittens in pounds and shelters.
- No additional food or vet bills for the offspring.
- No need to find homes for unwanted or unexpected litters of puppies or kittens.
- Save money from expensive surgeries from car accidents or fights, which are less likely to occur if your pet doesn't roam around.

- The registration fee for a de-sexed dog is less than that of non de-sexed dog.

- You and your dog have nothing to lose and everything to gain from de-sexing your pets. Do yourself and your companion a favour and desex your pets.

Dogs and Children

Having or being familiar with dogs can be a great experience for children. It is very important, however, to teach them a few tips and ground rules that will make interaction with dogs fun and safe for them. Here are some basic tips to teach your child about when it comes to meeting a dog.

To start with it is a very good idea for a child to learn to always ask before petting a new dog. From there a gentle approach is a good start to a dog/child friendship.

It is good to start by the child holding out their hand and letting the dog sniff it. If the dog comes closer, it is feeling relaxed and interested in some attention. If it doesn't come closer, it may just take a little bit of patience and for the child to wait until the dog is comfortable enough to approach and meet someone new.

It is good when around a dog, the child tries to stay reasonably calm and not rush at the dog or make lots of noise, this could confuse or scare the dog.

When they are petting, it is a good idea that they avoid tapping the dog on the top of the head. They much prefer a rub behind the ear or a stroke on the shoulder or under their chin.

If you have a puppy or dog in your household, it is also very beneficial for them to be introduced to children from early on. It is a good part of social training and positive for them even if they are not going to have children around them a lot of the time.

Answers to this edition's crossword:

Across: 1. Ask; 5. Bloodhound; 6. Reproductive; 8. Avalanche;

Down: 2. St Bernard Pass; 3. Cancer; 4. Spring; 7. Cockatoo.

Choosing a Bird to Suit You

Budgerigars come in a great array of different colors. They are relatively inexpensive to keep and can be bred easily. You can keep them in groups or individually and they are great sound mimics.

Parrots and Cockatoos can be quite costly to buy and many of them have a very loud call. Cockatoos do have a very affectionate nature.

Canaries and Finches can be kept alongside each other. Finches adapt

very well and quite often will start nesting quickly, but do not often become tame. Canaries have a beautiful song and come in a great range of lovely colours. They are also not destructive to woodwork and furniture.

There are so many wonderful and varied breeds of birds available. It is a very good idea to do your research and pick a breed that suits your lifestyle and environment.

Selecting the right dog for your family

The decision to add a new four-legged friend to your family should not be taken lightly. There are many things to consider, not only the breed of dog, but the purchase price, and the continuous costs of feeding, grooming and health maintenance. Also whether you have the time for training and daily exercise and an appropriate environment to house them. We, your veterinarians are charged with the responsibility of maintaining their health. But if you do decide to purchase a dog, choosing the correct breed for your circumstances is very important and can save many years of stress both emotional and financial. To help with the latter we recommend that all pets now have health insurance to avoid major shocks to the owners wallet and allow us to provide the absolute best levels of appropriate care

Active dogs such as Kelpies, Border Collies and Labradors, require a lot of exercise both physically and mentally. Smaller breeds such as Miniature Poodles, Cavaliers and Whippets, may better suit families and the elderly. Terriers breeds such as Jack Russels, West Highlands and Staffordshire Bull Terriers, require dedicated owners with an emphasis on training. Care must be taken with stock and other pets with Terrier breeds... Many a backyard chook has succumbed to their instincts!

If you are considering purchasing a puppy or adopting an adult dog, feel free to come in and have a chat with our experienced Team to assist you in selecting the right dog for your family.

Competition for our readers! WIN a \$50 shopping voucher

- 1) Just answer the following question:
Which article did you like best in this issue of Your Vet?
- 2) Choose your preferred voucher from the list below:
K Mart Australia Ltd, Coles Myer Ltd, Target Australia Ltd or JB Hi Fi.
- 4) Email* your answer, name, address and phone number to competition@yourvet.com.au with the subject heading Spring Vet 2012.
* By providing us with your email address, you agree to receive future marketing material.

THAT'S IT! GOOD LUCK!

Entries must be received by 30/09/2012 to be in the running

Clever CROSSWORD

Each of the words can be found in this issue of "Your Vet".

Across:

1. A child should ___ before petting a new dog.
5. A dog with a superior sense of smell.
6. De-sexing is the surgical removal of an animal's _____ organs.
8. Swiss Alpine club used rescue dogs to locate people trapped by...

Down:

2. A mountain route through the Alps.
3. De sexing reduces the risk of...
4. Abscess season for cats.
7. A bird with a very affectionate nature.

Answers can be found on the bottom right of the inside right page.
